

You've heard the story—you know what AguaClara does. AguaClara designs gravity-driven water treatment plants. No doubt you've spent time in the lab and seen the work that students are doing to improve the water treatment process. And of course you know that several plants have already been built in Honduras. You probably even know the names of a few of the plant sites. But believe me—you only have half the story. No number of pictures can compare to the experience of walking into an operating AguaClara plant.

QUICK TIPS

- White shoes are probably not the best choice.
- If you've got a sweet tooth, keep an eye out for Sarita ice cream shops. Try the Chocobanano!
- Bring books to share
- Imodium will serve you well
- There will be occasional WiFi, but consider using the trip as a chance to take a break from social media. Forget about your snapchat streak and immerse yourself in the world around you!
- Get to know the Hondurans—they have a lot to share.
- You're probably a little nervous about this trip—there are a lot of unknowns. Just know that it will all be fine!
